TechCondensed 2016 Montreal Canada Agenda

Short and sweet, Techcondensed 2016. Montreal Canada will provide you with valuable insights into everything that is new with BASIS technology.

I. BASIS tools for developers

a. Eclipse and Plugins

BASIS has developed their second generation Business BASIC Development Tools (BDT) on the most popular framework in the world today, Eclipse.

This session showcases all of the plug-ins that are available to the developer community, from the Code Editor, to WindowBuilder, to AppBuilder, including a smorgasbord of utility plug-ins from Enterprise Manager to Unit tests, Performance Analyzer, and many, many more.

b. Full Text Search with Lucene - smart and convenient

The new, Google-type Full Text Indexing and Searching capability can work on any of the BBj file types, as well as other common file formats such as Microsoft Word documents and PDF files via the Apache Tika library.

The DBMS uses this technology to tie data files to full text indexes, providing incredibly fast and robust full text searching over the entire contents of the data.

Through the use of several new built-in system SPROCs, users can perform these searches on a single table or simultaneously over any number of tables in the database.

c. Business Intelligence with Dashboards and Jasper Reports

Business intelligence is a process for analyzing data and presenting actionable information to help executives to make more informed business decisions.

BI according to BASIS encompasses easy-to-use tools, such as digital dashboards and Jasper Reports.

In this session, you will see how BASIS tools can help you collect data from internal systems and external sources, prepare it for analysis, develop and run queries against the data, and create reports, dashboards and data visualizations to make the analytical results available to corporate decision makers as well as operational workers.

II. AddonSoftware ERP for ISVs and End Users

BASIS has delivered a modern second-generation graphical set of ERP building blocks for ISVs and End Users, including Accounting, Distribution, Manufacturing, WebStore and CRM integration.

It is developed in BBJ and Barista, and supplies ISVs with an abundance of business opportunities including AddonSoftware's unique commercial open source partnership program.

It ships the ERP standards out of the box, and comes with a powerful RAD tool that allows developers to add customizations in a jiffy.

III. Web and Mobile With BASIS

BASIS does not only supply you with the latest and greatest in BBJ technology but can deliver professional services to support you in the modernization of your existing applications.

For BBJ developers, BUI certainly is the superior web app development paradigm and platform of the future. We are constantly amazed at the number of sophisticated BUI apps our customers are writing.

BASIS Professional Services has also applied and enhanced this technology to create successful apps for mobile devices.

At TechCondensed 2016 Montreal Canada , we will showcase several examples for game-changing mobile web applications, developed by BASIS.
