

BLM 11.6.1 - New TRL Files

In order to use the latest revisions of BASIS products you need to use the latest BLM – version 11.6.1 that supports the new “Tamper Resistant License” (TRL) format.

The versions of the BASIS products that require this type of license and BLM are:

- BBJ 9.12 or higher
- PRO/5 9.00 or higher
- VPRO/5 9.00 or higher

You can download the latest BLM by going to the BASIS webpage in the usual fashion.

You can use the new BLM to run older licenses not in the TRL format.

Important License Information - Please Read

Please install a new BLM and re-register your serial number for an updated license. The BLM included with the BBJ download can be used or new standalone BLMs are available on the (V)PRO5 9.00 RC download page .

Running newer products, (V)PRO5 9.00 RC, BBJ 9.12 RC, or BBJ development builds, without using the new BLM and re-registering for a license causes the product to nag with a -114 error:

```
UNABLE TO CHECKOUT A VALID LICENSE: BBJ : -114: SIGN= attribute required, but missing from license.
```

```
Please upgrade your BLM and re-register your license.
```

```
or
```

```
FLEXlm Error = -114, Unknown Error.
```

Your old clients will still be able to use the new license from the new BLM.
